NO GMO STATEMENT

French and American Oak

July 1, 2015

GMO studies started about 50 years ago. Because oak trees grow naturally and the average age of the logs used for winemaking is about 80 years old, GMO analysis is not conducted on French and American white oak used for winemaking.

At Oak Solutions Group, the oak we use is sourced from our own mills, so we can be sure of the quality and origin of our supplies.

Sincerely,

David Llodrá

R&D Director
